#### Abstract

Key Vocabulary What is 8 multiplied by 6 ? What is 6 times 8 ? What is 24 divided by 6 ?

They should be able to answer these questions in any order, including missing number questions e.g. $9 \times \bigcirc=54$ or $\bigcirc \div 9=11$.

## Top Tips

The secret to success is practising little and often. Use time wisely. Can you practise these KIRFs while walking to school or during a car journey? You don't need to practise them all at once: perhaps you could have a fact family of the day. If you would like more ideas, please speak to your child's teacher.

Look for patterns - These times tables are full of patterns for your child to find. How many can they spot?

Use your ten times table - Multiply a number by 10 and subtract the original number (e.g. $7 \times 10-7=70-7=63$ ). What do you notice? What happens if you add your original number instead?
(e.g. $7 \times 10+7=70+7=77$ )

What do you already know? - Your child will already know many of these facts from the $2,3,4,5,6,8$ and 10 times tables. It might be worth practising these again.
