Dear prime minister,

I am writing about a problem - one
of the biggest threats EVER! - Plastic
pollution.

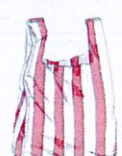

Plastic pollution is plastic where it
shouldn't be. It's in the sea and it's

causing harm. I have been studying
Cornwall fishing, and all of the things

twinkl.com

that have caught my attention was plastic pollution and how we are losing marine life. My opinion on plastic pollution is horrible, it is disgraceful. Imagine swimming around and eating plastic. Did you know that by the year 2050 ~~by the year~~ there will be more plastic than fish? Millions of animals from birds to fish are killed every year to marine organisms. Nearly 700 species including endangered ones, are known to be effected by plastic.

Never before, have our oceans be so dirty and gross. Plastic pollution is effecting marine life by poor fishes swallowing our rubbish, our

waste thinking it's colorful fish for them,
I feel so bad for them. We need to act now.

Humans eat 40 pounds of plastic in their

lifetime. People living along rivers and

coastlines in China are one of the biggest

victims of plastic pollution.

Despite our awareness, no one seems to be doing

anything anything it's absolutely shocking

I can't believe it. The problem of plastic

pollution needs preventing by a shift in the

Public mindset away from our throwaway

culture. Focused on convenience being equal

to dispose towards a vision of healthy

sustainable community and more connected

community. We need to make a change to
this because the children of the future
want a ocean full of life.

Yours Sincerely,

Olivia Jenkin.
